To work with the reinforcement learning methodology, they first defined the reward function that can formulate the ring problem and a neural network policy that can turn inputs to actions. Once that's done, the policy parameters are optimised by maximising the reward functions using Soft Actor-Critic (SAC) algorithm. System overview

Deep Reinforcement Learning Model Outperforms Humans In GT ...

Reinforcement Learning (RL) refers to a kind of Machine Learning method in which the agent receives a delayed reward in the next time step to evaluate its previous action. It was mostly used in games (e.g. Atari, Mario), with performance on par with or even exceeding humans.

This is an extraordinary resource for a graduate student. Szepesvari reviews the current place of the literature, gives a very quick but still thorough introduction to reinforcement learning, and includes algorithms for quite a few methods. This is everything a graduate student could ask for in a text. And in 100 pages! Fantastic.
