2.4.1 Electrical-mechanical analogies. An illustration with many abstractions on which we can practice is the analogy between a spring-mass system and an inductor-capacitor (LC) circuit.In the circuit, the voltage source—the V in on its left side—supplies a current that flows through the inductor (a wire wrapped around an iron rod) and capacitor (two metal plates separated by air).

Geotechnical engineering is required in all aspects of civil engineering because most projects are supported by the ground. A geotechnical engineer may develop projects below the ground, such as tunnels, foundations and offshore platforms. They analyse the properties of soil and rock that support and affect the behaviour of these structures.
