O H Mowrer S Theory

Mowrer's primary achievements in learning theory followed from his work with aversive conditioning or avoidance learning. He formulated a two-factor learning theory, arguing that conditioning (sign learning) is distinct from habit formation (solution learning). This theory was initially described in a 1947 paper.

Orval Hobart Mowrer - Wikipedia

In the mid 20th century, O. Hobart Mowrer was a celebrated academic psychologist, owing largely to his experiments with animals and humans that led to breakthrough theories on how we learn. His numerous publications in this arena propelled him to the post of President of the American Psychological Association in 1954.

Orval Hobart Mowrer | Psychology Wiki | Fandom

Mowrer's (1960) two-factor theory attempted to reconcile classical and operant conditioning by illustrating that these were not entirely separate processes.(Mowrer, 1960) On the contrary, these were part of the avoidance learning process, where humans—or even animals—developed an almost instinctive dislike or fear for certain things or events when these things or events were part of an earlier fearful or painful experience.

Mowrer's Two Factor Theory Essay Example | Graduateway

In 1947, O. Hobart Mowrer proposed his two-factor theory of avoidance learning to explain the development and maintenance of phobias. Mowrer's two-factor theory combined the learning principles of classical and operant conditioning.

Operant Conditioning and Avoidance Learning - Anxiety ...

Two-factor theory (Mowrer, 1947, 1951, 1956) remains one of the most influential theories of avoidance, but it is at odds with empirical findings that demonstrate sustained avoidance responding in situations in which the theory predicts that the response should extinguish. This article shows that the well-known actor-critic model seamlessly addresses the problems with two-factor theory, while simultaneously being consistent with the core ideas that underlie that theory.

Two-factor theory, the actor-critic model, and conditioned ...

A solution to that conundrum was offered in the two-factor theory formulated by Orval (Mowrer, 1951), who proposed that the performed response was reinforced by fear reduction (Hull, 1943). Specifically, Mowrer argued that as a result of Pavlovian fear conditioning (first factor), i.e., an antecedent stimulus (e.g., a tone) being associated with the administration of an aversive event (e.g., a shock), presentation of the antecedent stimulus will come to evoke fear.
