the rate at which one currency trades against another on the foreign exchange market. If the present exchange rate is  $\text{£}1 = \$1.42$ , this means that to go to America you would get \$142 for  $\text{£}100$ . Similarly, if an American came to the UK, he would have to pay \$142 to get  $\text{£}100$ . Although in real life, the dealer would make a profit.

The exchange rate affects the rate of inflation in a number of direct and indirect ways: Changes in the prices of imported goods and services – this has a direct effect on the consumer price index. For example, an appreciation of the exchange rate usually reduces the price of imported consumer goods and durables, raw materials and capital goods.

the price of one currency expressed in terms of another currency, or against a basket of other currencies. In a floating exchange rate regime rates are determined by the forces of demand and supply in the foreign exchange market. However, exchange rates may be pegged against another currency, or fixed to the value of gold.
